AB- <NV> NOVELTY - The application includes instructions for generating a null UDP packet, in response to TCP packet received from external manager. A window in local firewall, is opened between local and remote UDP port in response to generated null UDP packet, for transmitting UDP packets containing user data, received from the remote client to socket subsystem and transport layer.|

AB- <BASIC> DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

(1) communication establishment method; and

(2) computer program product comprising computer readable medium including remote communication program.

USE - For communicating client through Internet.

ADVANTAGE - Since UDP packets are transferred through firewall-window, the voice data is efficiently transferred and the higher bandwidth is available for a call, thus connection is allowed for voice traffic, even though external manager is used to initiate the call and 2-way walls of video communication is facilitated.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart explaining call setup, firewall-window opening and direct packet transfer processes for firewall communication program.
